### **DETAILED ACTION**

1. The amendment filed on 7/23/04 has been fully considered and made of record in the instant application.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kawakita et al. (U.S 5,960,538).

With respect to Claim 1, Kawakita teaches a dielectric core layer 21 having a first surface and a related second surface and divided into a plurality of partial areas (i.e. between conductive portions 43 in Fig. 15b). A plurality of solid conductive posts 23 passing through the dielectric core layer 21 and connecting to the first surface and the second surface of the dielectric core layer 21, wherein the conductive post 23 (i.e. under copper patterns in Fig. 15b) are arranged in an array form in at least one of the partial areas of the dielectric core layer (see col. 7 lines 10-30 and 10 lines 14-47).

With respect to Claim 2, Kawakita teaches wherein further comprises two conductive layers 22, 32 being formed on the first surface and the second surface of the dielectric core layer respectively, and the conductive layers 22, 32 are intact and not patterned some point during the fabrication of the printed circuit board (see Figs. 3b and 4a).

The prior art made of record and not relied upon is cited primarily to show the product of the instant invention.
